

Open Call for PhD or Post-Doctoral Position

We are excited to announce a fully funded PhD or Post-Doctoral position in a cutting-edge, multidisciplinary research project at the intersection of microbiology, biochemistry, bioinformatics, and geology, with significant implications for climate change.

Project Overview:

Our research aims to uncover the hidden interactions in methanogenic sediments. The successful candidate will lead innovative research to transform our understanding of these complex organisms and their impact on global methane cycle.

Qualifications:

- MSc in Earth Sciences, Chemistry, Microbiology, or related fields.
- Excellent communication and teamwork skills.
- Background in biogeochemistry or microbiology (field and lab work) is an advantage.

Location:

Ben-Gurion University of the Negev, Israel
